

POLLINATORS & CLIMATE CHANGE FORUM

Trivia & door prizes available!

August 8 @ 1-4PM EDT

Join a Virtual Pollinators & Climate Change Forum exploring the vital role pollinators play in the health of the land and how changing climates are impacting these species that Métis citizens have long understood as part of a living, interconnected environment.

Hear from knowledgeable guest speakers, share in learning grounded in respect for the land and all living beings, and explore practical ways to support pollinators in your own community. Participants can also take part in interactive activities, trivia, and prizes.

Hosted by the MNO Lands, Resources and Consultations (LRC) Environment and Climate Change team.
